PROFILE

Advanced Systems Engineering student (UTN FRC) focused on backend development and software engineering.

Experience building REST APIs and software projects through academic and personal work using Java, Spring Boot, relational databases, authentication systems and development tools.

Strong analytical and problem-solving skills, with interest in scalable systems, cloud technologies and collaborative software development environments.

EDUCATION

Universidad Tecnológica Nacional – Facultad Regional Córdoba (UTN FRC)

Information Systems Engineering

2020 – Present | Advanced student (4th Year)

TECH STACK

Backend

Java • Spring Boot • REST APIs • JPA/Hibernate • SQL

Tools

Git • Maven • Postman • Jira

Concepts

JWT • Layered Architecture • REST API Consumption • Agile/Scrum • Networking Fundamentals

Frontend

React • JavaScript • HTML/CSS

PROJECTS

Expense Tracker API | Personal Project

Backend application for personal expense management developed with Java and Spring Boot.

- Developed REST API using layered architecture (Controller, Service, Repository)
 - Implemented authentication and authorization using JWT
 - Integrated PostgreSQL with JPA/Hibernate
 - Added validations and global exception handling
 - Implemented ownership-based access control
 - Version control and branch management with Git
 - Tested and validated REST endpoints using Postman
 - GitHub: github.com/ValGP/expense-tracker
-

CERTIFICATIONS

Functional Testing Certification - UTN FRC

LANGUAGES

English: B1 (Intermediate)
